

TDWI Data Warehousing Architectures – Workshop Edition

In the workshop edition of this course you'll experience all of the classroom training from the lecture-based course, and extend that learning through practical workshop activities using your programs, projects, and problems. During the workshop activities you will practice and develop useful results in the areas of:

- Architecture Perceptions
- Defining the Scope of Architecture
- Assessing Your Current Architecture
- Evaluating the Factors that Drive Architecture Decisions
- Describing and Contrasting Architectural Alternatives
- Quantifying Architecture Strengths and Weaknesses Based on Your Needs
- Choosing the Right Data Warehousing Approach for Your Organization
