

The biggest benefits expected:

1. Improved network reliability
2. Wider adoption of voice, video, visual data (maps, simulation)
3. Lowered costs
4. Improved security
5. Other (stateless autoconfiguration, mobility, better router efficiency)

The biggest stumbling blocks:

1. Lack of trained staff
2. Lack of sufficient financial resources
3. Lack of leadership
4. Lack of IPv6-enabled equipment
5. Lack of software and security upgrades
6. Other (legacy equipment, lack of detailed plans in the trenches)
