

## The biggest benefits expected:

1. Improved network reliability
2. Wider adoption of voice, video, visual data (maps, simulation)
3. Lowered costs
4. Improved security
5. Other (stateless autoconfiguration, mobility, better router efficiency)

## The biggest stumbling blocks:

1. Lack of trained staff
2. Lack of sufficient financial resources
3. Lack of leadership
4. Lack of IPv6-enabled equipment
5. Lack of software and security upgrades
6. Other (legacy equipment, lack of detailed plans in the trenches)
