

# 2008 Scooter Comparo

## How to Read This Comparo

Scooters are arranged alphabetically by manufacturer name, then model name/number.

Scooter manufacturers were asked to report data ranging from available colors to weight capacity and turning radius. Manufacturers also were asked the scooter's "target end-user" to indicate the environments and situations best served by each vehicle. When information is not applicable or not available for a particular scooter, "N/A" is listed.

Some scooter models are available in both 3- and 4-wheel configurations, with different weights, weight capacities, etc., depending on configuration. In those cases, we list the two specifications so that the first spec refers to the 3-wheeler, and the second spec refers to the 4-wheeler.

Some statistics, such as top speed, will be impacted by variables including passenger/cargo weight, terrain, battery condition, etc.

Accessories are listed as space allowed, and additional standard accessories may be included with the scooter. Vehicle weight is listed as an overall weight, with the scooter fully assembled and including batteries.

RESNA (Rehabilitation Engineering & Assistive Technology Society of North America) incline ratings, in degrees, are self-reported by the manufacturer.

This comparo is designed to give dealers a "starting point" when researching vehicle options for a variety of customer needs. Scooters and data are listed as space permits. For complete specifications, please contact the vehicle manufacturers using the Source List at the end of the comparo.

Manufacturer/Model	Accessories (standard)	Colors	Number of wheels	Top Speed (mph)	Vehicle Length/Width	Seat Depth/Width	Turning Radius	Vehicle Weight	Weight Capacity	Disassembles for transport?	Target End-User	Additional Features
