REDMOND VENDOR PROFILE

## Find Peace of Mind With Your SharePoint Recovery Tool

**Simplicity. Speed. Security.** Quest® Recovery Manager for SharePoint delivers all of this and more.

**Q**uest® Recovery Manager for SharePoint performs backups and granular and disaster level recovery of SharePoint data. It saves time, resources and money by scheduling native SharePoint configuration and content database backups. It also works with other third-party solutions you may already have—everything from LiteSpeed® for SQL Server and Microsoft System Center Data Protection Manager, to Symantec Veritas NetBackup, Symantec Backup Exec, or IBM Tivoli Storage Manager for Databases.

**Productivity—Anytime.** Recovery Manager restores all information saved in the databases, whenever you need it. This includes alerts, permissions, workflow state and associations, metadata, custom views, Web Parts links/farm services and configuration settings. And it does all of this without slowing your resources to a crawl. Plus, you can restore data to the original or a new SharePoint site or save it to your desktop—even when SharePoint isn't available.

**It's Time to Save Time With SharePoint Recovery.** Recovery Manager's quick backup and restore process makes it a snap to search, locate and preview any item from across multiple database backups and recycle bins—before restoring it. There's also a web-based console to assign search and restore options.

Your entire  
SharePoint farm  
just went offline.

**What do you do?**

Complete restoration is simple with  
**Quest® Recovery Manager for SharePoint's**  
new disaster recovery tool.

PART OF  
**SHAREPOINT 2010**  
IN FOUR EASY STEPS

**Your SharePoint Data Is Safe. You Can Bet the Farm(s) On It.** When calamity strikes your SharePoint farm, you're left with two options: panic, or relax knowing your critical data is safe thanks to Recovery Manager. Whether it's full or granular content recovery, you'll find the data you need when you need it. Life on the farm was never more simple and secure.
