

The **ONLY** Storage Purpose-built for Hyper-V

Gridstore software-defined storage solutions accelerate application performance up to 4 times at 1/2 the cost of traditional SANs.

Unique in the market as being designed from the ground up for Hyper-V and Windows 2012 environments, Gridstore's innovative solutions address the primary storage challenges that impact application performance in virtual environments and give customers a real point of difference.

Gridstore 3

- Delivers Superior Cost/Performance
- Provides simplified management via tight integration with Microsoft management tools
- Enables massively parallel performance and scaling with pay-as-you-scale grid architecture
- Patented Server-Side Virtual Controller™ Technology (SVCT) eliminates the I/O blender effect at the source
- Delivers the industry's only end-to-end storage Quality of Service (QoS) to guarantee performance for the most important applications.

High-performance storage starts with as little as 36TB yet grows to 3PB, providing the ideal cost-effective solution for clients of all sizes.
