

Take Control of Privileged Access

Privileged access management doesn't have to be a career-critical exam with nothing but bad answers

Centrify Server Suite helps you mitigate insider threats through simplified privileged access management and auditing that links all privileged activity back to an individual (as opposed to a shared account). And Server Suite's real-time, over-the-shoulder video auditing gives you a perfect record of what privileged users are doing.

Take control of privileged accounts across your Windows and UNIX servers to enforce a least-privilege access model and streamline regulatory compliance.

<http://www.centrify.com/privilege-management>

Follow Centrify:

Your users are
over-privileged.

Their activity is
under-audited.

You're headed for:

- ☐ Failed audits.
- ☐ Security breaches.
- ☐ Disaster.
- ☒ **All of the above.**
