VIRTUALIZATION REVIEW VENDOR PROFILE

## Acronis® vmProtect™ 6: A Higher Level of Protection for Your VMware® Environment

**Y**ou've started virtualizing your servers and are planning next steps. Some of your critical data that used to run on 5, maybe even 10 machines now runs together on a single server host. What's your tolerance for downtime? A day? An hour? How about zero? You say you don't have time to jump through hoops right now to address backup and recovery of those virtual machines? Think again!

**Acronis® vmProtect™ 6** is the easiest to deploy, simplest to use, most efficient, secure, flexible, and scalable backup & recovery solution for VMware you can buy. Choose Acronis vmProtect 6 and make your own slam dunk.

### What makes it better?

**Installs in minutes.** Seriously. Other solutions can be so hard to get off the ground that you may wonder whether it's worth the trouble. That's why many virtual environments remain unprotected. Acronis vmProtect 6, on the other hand, takes only about five minutes to install and to begin backing up your virtual machines. In fact, it's no trouble at all.

**Truly easy to use.** You don't have to guess what step to take next. Our intuitive interface [shown below] can be accessed using

any web browser and guides you through the backup process and makes recovery of whole systems or individual files as easy as clicking a mouse.

**Security James Bond would approve of.** We don't know that for sure, but we do know that government-grade 256-bit data encryption and the ability to verify the integrity of each file ensures that only you can access your data.

**Built-in deduplication.** We include it at no charge to cut your storage costs. Other popular solutions don't offer it at all. Go figure.

**Your own cloud with a silver lining.** Acronis vmProtect 6 works seamlessly with an available Acronis Backup & Recovery Online for Virtual Machines cloud storage subscription so you can back up your data offsite in the cloud for guaranteed access in case of a site-level disaster. Not many solutions offer offsite, cloud-based protection for your virtual machines. We wonder why.

**Simple Per-CPU Pricing.** Acronis vmProtect 6 is priced per-CPU pricing to help minimize and simplify total cost of ownership. Calculate the number of processors on your server hardware and purchase that number of license keys. Why make life difficult?

### Additional Advantages

- **Flexible.** Can be installed as a virtual appliance or on any Windows machine
- **Works in any size environment, even a really big one.** One instance of Acronis vmProtect 6 backs up virtual machines from multiple ESX or ESXi hosts.
- **Easy recovery.** Restore a virtual machine simply by running its backup image.
